SUMMARY

I am an AI Application Engineer with 3.5+ years of experience, proficient with Java, Python, LangChain, AWS services. Previously I worked with Deloitte as a Full Stack Software Engineer and Case Western Reserve University as an AI Engineer

WORK EXPERIENCE

Case Western Reserve University

Cleveland, OH

AI Engineer – Generative AI | Utech

Jan 2025 – Jan 2026

- Architected and deployed a RAG pipeline to simulate an artificial patient for primary consultation training workflows
- Implemented real time event streaming using SSE to monitor orchestration flows reducing debugging time by 60%
- Developed AI news analytics dashboard with an integrated chat interface with AWS and Streamlit processing 10k+articles/month
- Built an AI agent for the university library that automated 40% of front desk queries using LangChain, Ollama and context-aware document retrieval
- Orchestrated a Dental Radiology Report generation system reducing draft time from 180 min to 30 min using RAG and GPT OSS models

Deloitte

India

Full Stack Software Engineer

Jun 2022 – Mar 2024

- Built Spring Boot microservices for an Employee Performance Analytics platform supporting HR onboarding workflows and regional dashboards across Canada and EMEA
- Implemented LDAP-based identity provisioning and approval automation services integrated with ServiceNow, enabling secure external-user onboarding ensuring 99.99% pipeline uptime
- Engineered an internal LDAP-backed messaging service deployed on containerized EC2 infrastructure behind load balancers to support organization wide communication workflows
- Designed Airflow pipelines archiving Microsoft Teams metadata to Amazon S3 and developed analytics metrics from ServiceNow datasets powering workforce activity and escalation dashboards used by senior management
- Executed cross database schema migrations across PostgreSQL, MongoDB, and DynamoDB to support external REST API integrations without breaking existing services

Software Engineer

Dec 2021 – Jun 2022

- Resolved production backend incidents involving API failures, data inconsistencies, and service outages, reducing recurring issues by 20% through root-cause analysis and fixes
- Investigated logs, updated queries and configurations, and supported deployment escalations across enterprise applications, improving incident resolution time by 25%
- Used OpenTelemetry distributed tracing to diagnose authentication failures and contributed to release reliability through deployment support within the change management pipeline

SKILLS

Backend Systems: Java, Maven, Gradle, Servlets/JSP, Spring Boot, Apache Kafka, Jenkins, Terraform, Python3, FastAPI

Cloud and Data Pipelines: SQL, Apache Airflow, AWS Cloud Orchestration (EC2, S3, Lambda, Athena), Linux, Git, Docker, Kubernetes

AI Frameworks: LangChain, LlamaIndex, DSPy, RAGAS

Frontend Frameworks: Next.js, TypeScript, TailwindCSS, Streamlit

PROJECTS

RabbitHole (Python, NextJS) An AI Powered Research Gap Analyzer for automated literature review

[Github](#)

- Built an AI research gap analyzer using FastAPI, Gemini LLMs, and citation graph traversal with embedding similarity and MMR re-ranking, reducing literature review time from weeks to minutes

Urban Stress Indicator Dashboard (Python, Apache Spark, Airflow, AWS)

[Github](#)

- Engineered a Spark, Airflow, AWS data pipeline implementing medallion-architecture ETL to generate composite urban stress indicators from heterogeneous public datasets for analytics dashboards.

ACHIEVEMENTS

Best Solo Hacker at Kent Hack Enough 2026 organized by Major League Hacking Society for RabbitHole Project

[Credentials](#)

EDUCATION

Case Western Reserve University | Masters in Computer Science and Engineering

Vellore Institute of Technology | Bachelor of Science in Information Technology
