

Hiring Committee,

I am writing to highly recommend Sri Satya Sai Immani for a position within your organization. I had the pleasure to supervise Sri as a student AI Research Assistant at Case Western Reserve University, where our student AI experts assist faculty and staff with their real-world AI projects.

Sri worked on many projects as a part of this program. Some examples include an AI agent that drafted test questions for medical students by pulling in medical images and related text from an online database via an API. He also drafted an agent for our university library and built an online database of AI projects active on campus. He architected a backend database to track chemicals used in the many labs at CWRU.

One of the more complicated and interesting projects Sri worked on was a patient portal simulator for a course for nurse practitioners. The AI agent simulates a patient asking a primary care physician medical questions in a chat portal. The primary technical hurdle was implementing complex state management to ensure the AI maintained "memory" of specific student interactions, allowing the medical case to evolve dynamically based on the student's clinical decisions. It was a significant technical challenge which Sri was able to solve.

Sri is exceptionally adept at navigating the modern tech stack. He worked with many technologies across these many projects, including AWS, Azure, Microsoft Copilot Studio, Microsoft Power Platform (Power Apps, Power Automate, Dataverse), and more. Often, he was picking up these technologies with little or no experience. In all cases, he learned quickly and immediately brought value to the project.

Just as importantly, Sri also demonstrated that he is a great colleague. He was friendly, professional, and collaborative within the internal team as well as with external stakeholders. I also knew that I could rely on him. He worked on projects independently, diligently and responsibly. His commitment and character were particularly notable when he left the team in order to pursue another opportunity. Sri took the time to get another AI Research Assistant up to speed on his active projects so that there would be as little disruption as possible.

I highly recommend Sri and would rehire him without hesitation. Feel free to contact me if you have any questions or would like a more in depth conversation.

Sincerely,
Tron Compton-Engle
